OBJECTIVE

Seeking a challenging role in a dynamic organization to enhance my skills, contribute effectively to its growth, and advance my professional development.

EDUCATION

PES University <i>B.Tech in Computer Science and Engineering (AI & ML)</i>	CGPA: 8.79 Bangalore
Kumaran's Composite PU College <i>II PUC – Science (PCMB)</i>	95.33% Bangalore
Auden High School <i>CBSE Class X</i>	92.33% Bangalore

SKILLS

Languages: C, Python, JavaScript, SQL

Frameworks & Technologies: React.js, Node.js, Express.js, MongoDB, PostgreSQL, Socket.IO, Prisma ORM, Drizzle ORM

Concepts: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, Computer Networks

Tools: Git, Linux, Google Gemini AI, Groq API

PROJECTS

AI Applicant Tracking System | *React.js, Node.js, Express.js, PostgreSQL, Prisma ORM, pgvector, Google Gemini AI*

- Built an AI-powered ATS with resume parsing, ATS scoring, and semantic candidate ranking.
- Implemented vector search using pgvector embeddings and hybrid AI-based matching.
- Added JWT authentication, role-based access control, and real-time notifications.
- Integrated AI-powered resume analysis and job description bias detection.

NovaChat – AI Conversational Assistant | *React.js, Node.js, Express.js, MongoDB, Groq API, Tavily API*

- Developed a full-stack AI chat platform supporting multiple LLMs and live web search.
- Built multimodal image/document analysis and AI image generation features.
- Implemented JWT authentication with AES-256 encrypted API key storage.
- Optimized conversations using summarization and intelligent model routing.

Watch2Gether – Real-Time Collaborative Platform | *React.js, Node.js, Express.js, PostgreSQL, Socket.IO, Drizzle ORM*

- Built synchronized watch parties with real-time chat using Socket.IO.
- Developed collaborative coding IDE, shared notes, and multi-user whiteboard.
- Implemented JWT-authenticated WebSockets with RBAC and automatic reconnection.
- Added room management, invitations, online presence, and persistent messaging.

Matrix Factorization Router for LLM Selection | *Python, PyTorch, Sentence Transformers*

- Implemented a RouteLLM-inspired matrix factorization routing model.
- Combined learnable model embeddings with sentence embeddings for routing.
- Trained on the RLAIF preference dataset using checkpointing and early stopping.
- Evaluated routing performance to establish a strong baseline model.

ACHIEVEMENTS

Successfully completed a research internship at PESU Intelligent Labs (PESU PI), working on the identification and watermarking of LLM-generated text, and received a Certificate of Completion.

Recipient of the CNR Rao Scholarship for outstanding academic performance.

Recipient of the DAC Scholarship for academic excellence.
